Wehrli Legacy
https://wehrlilegacy.org/

Legacy
Passed down from father to son, inherited through marriages, that which is passed from generation to generation, which we strive to honor and respect: our surname, our family.
Wehrli Legacy emerges as a legacy for our descendants, everything we have built and achieved, but also everything we can build and achieve.

Central Proposal
To serve as an ecosystem for investment in assets, companies and businesses, and expansion of projects, contract signings, and a network for the development of projects, ideas and businesses accessible to everyone worldwide without distinction, generating real opportunity.

Core Values
We think about legacy, for our descendants and for the global economy.

We value simplicity with efficiency, resource optimization, transparency, and trust.

Wehrli Equity Token (WEH)
It is the digital equity participation token of the Wehrli ecosystem, created to represent economic and strategic rights linked to the company's business structure. WEH was designed to operate in a global market, with blockchain infrastructure compatible with Web3 wallets and an architecture focused on compliance, traceability, and corporate governance. Its goal is to connect fundraising, expansion, and business participation in a modern, auditable, and scalable digital format.

WEH is not born as a common utility token. It is designed as an equity token / security token, with documentary backing in the company's corporate structure and with issuance, custody, transfer, and eligibility rules defined in both contracts and corporate documents. This is what differentiates a real equity asset from a purely promotional token.

My Pain Point
Hi everyone, my name is Alym Wehrli, I am the founder of Wehrli Legacy.

My biggest challenge at the beginning was that I have many ideas and many projects, but we don't have infinite time, energy, or money, so we have to prioritize things; that's just life. Another difficulty was securing funding for the projects and dispersing it through multiple channels, so I started analyzing the development of a global digital structure where I could help people and companies worldwide, as well as professionally showcase the projects without dispersion.

Technical Description
